

In order to participate in the Healthcare track of the SSU Teacher Bootcamp you are required to have a Covid Vaccine or a declination form, a shadowing form, and have a current 2 Step TB test (completed within the year). A **2-step TB (tuberculosis) test** is often required for individuals shadowing in healthcare-related fields or academic programs. Here's what it involves:

A **2-step TB test** uses the **Mantoux tuberculin skin test (TST)** and is performed in **two parts**:

1. **Step 1:**
 - A small amount of PPD (purified protein derivative) is injected under the skin of your forearm.
 - You return **48–72 hours later** to have the site examined for a reaction.
 - If the result is **negative**, proceed to step 2.
2. **Step 2** (Performed 7 days after the first test is read):
 - The test is repeated on the **other arm**.
 - Again, return in **48–72 hours** to have it read

2 Step TB testing can be completed at your local health department:

Scioto County TB Clinic
