  - 4.1. Dr. Byers with Health Department
    - Here to answer more questions
    - Scioto County is about 58% of 65+ lagging behind on getting the vaccine
    - 20-29 age group is about 18% and in Scioto county we are lower than that
    - J&J efficacy: 66-72% effective, but no one was found to have severe illness or death still
    - Get whatever vaccine is available to you when it is available because you can't compare the different vaccines based on their studies and trials because that is like comparing apples to oranges. But if you have a strong preference, you could ask for a specific type.
    - Long term safety effects? Traditional vaccine development takes 10-15 yrs and the outcome takes many yrs to prove a difference in intervention and placebo group. Vaccines were brought to market that it was very clear it was preventing death and it wasn't clear about the durability and long-term safety questions. This is technology that has been around and used for Zika virus and it has been studied and there has not been any long-term effects of this yet. The long-term effects are identified within 6-8 weeks of getting the vaccine.

- Fertility with women: they are tracking women who have gotten pregnant since having the vaccine and this is being studied very closely. This is not founded in actual science it was started by an antivaccine person in Europe due to a 4 amino acid similarity to a portion of a protein associated with female infertility and this is like saying 4 words of the Gettysburg Address and then you recite the rest of the address off the top of your head.... Soooo very unlikely to happen.
